

## FROM THE PEOPLE WHO PIONEERED THE FIRST PRACTICAL BX CABLE CUTTER

### HOW TO REPLACE A GENUINE ROTO-SPLIT & ROTO-FLEX BLADE:

The standard B-102 blade is for cutting steel casing. The B-107 blade is designed to cut aluminum casing but also works well on larger steel casing from 1/2" Greenfield and above. The B-108 blade is for powerdrive use.

OUR TOOLS AND  
BLADES ARE 100%  
MADE IN THE USA

B-102 blades are lubricated  
**DO NOT REMOVE WAX**

OIL SHAFT PERIODICALLY

#### NEW BLADE STORAGE CARTRIDGE (SNAPS IN KNOB - STORES 6 BLADES)

**UPGRADE** any of your tools with:  
Cat. #101-106 Retrofit Kit  
Cat. #101-107 Power Conversion Kit  
Cat. #101-110 Handle & Blade Storage

For maximum blade life,  
lubricate the blade with dry  
lubricant stick Cat.#LS-105

U.S. PAT #3,851,397,  
#4,359,819 & #4,769,909

### REPLACING BLADE ON RS-101, RS-101A, RS-101AP & RF-120A:

Remove knurled screw ①. Using an adjustable wrench, remove nut ③. Swing up the top housing & push the handle assembly back about 1/2" inch. Lift out the blade ② & replace with a new blade, making sure that the arrow and logos are on top. Replace hex nut ③ & knurled screw ①. Please note that only a slight tightening of nut ③ is necessary since the nut will become secure during the first cut.

### REPLACE A BLADE ON THE RF-170 MC CABLE CUTTER:

Slide top housing to the middle position, remove nut ③ with an adjustable wrench, & slide out the handle assembly completely. Lift old blade up over the center of the shaft ④ using a screwdriver & slide the blade out through the bottom casing slot. Replace with a new blade, making sure that the arrow & logos are on top. Slide back handle assembly & retighten nut ③ slightly. Thanks to the self tightening feature the nut will become secure during the first cut.

**FOR LEFT HANDED USERS:** No Problem! Hold the Roto-Split upside down in your right hand & turn the crank clockwise with your left hand.
